

This name has been coined to fruits known to be very healthy. So, what can be expected from the oils originating from these super fruits?

Pomegranate seed oil: Recommended for ageing or sensitive skin. It contains a high quantity of unique conjugated fatty acid, punicic acid which has the ability to stimulate skin renewal by activating keratinocyte proliferation and it is anti-inflammatory because it inhibits matrix metalloproteinase.

Passion fruit seed oil (Maracuja oil): Recommended for ageing or damaged, normal to dry skin. It absorbs easily, has a light texture, is non-greasy and contains a high amount of omega-6 linoleic acid for deep skin conditioning. It also smells great!

Cherry kernel oil: This oil is a heavy oil with a high shine factor. It contains a significant quantity eleostearic acid which has some UV protective qualities. It contains anti-oxidants and vitamins useful for skin protection.

Baobab Oil: This exotic African oil is recommended for ageing or damaged, normal to dry skin. It has soothing properties.

Black currant seed oil: It has a very high gamma linoleic acid content, an omega-6 fatty acid, and is therefore recommended for ageing, damaged, or normal to dry skin, because it will be moisturising and smoothing.
