

Filcortex Veg is the result of the association of hair proteomics with biocomputing tools and associates the amino acids of the low sulphur keratin associated proteins with an exclusive cuticle interlock system which seals the amino acids into the hair fiber, increasing hair mass and reinforcing its structure. It rebuilds the hair cortex by replacing proteins of the hair cortex, repairs brittle and damaged hair, replaces hair mass and acts as a thermal protector of hair fiber. Natural origin 97.22% . INCI: Water (and) Kappaphycus alvarezii extract (and) Laminaria saccharina extract (and) hydrolysed rice protein (and) hydrolysed soy protein (and) glycine.
